

SOS Store Ordering System

your own custom catalogue

Do you manage a signage program for multiple locations?

Does managing your signage program eat up your time, and cause headaches?

Let SOS simplify your life.

The GET **Store Ordering System** (SOS) is a cloud based **Inventory Management & Procurement** system designed to assist you in managing all aspects of your company's retail signage program, including:

- Ordering
- Production
- Inventory tracking
- Warehousing and fulfillment
- Shipping
- Reporting

generates supplier orders for you

A WEB BROWSER AND INTERNET

All you need is a web browser and an internet connection to automate and simplify managing your retail signage program. No servers to buy, no IT approval to run.

Built using Open Source products such as Ruby on Rails (www.rubyonrails.org), PostgreSQL database (www.postgresql.org), SOS runs on secure, multi processor servers using Debian Linux (www.debian.org) operating system.

warehousing and fulfillment

WHO, WHAT, WHEN, WHERE AND HOW

Once all your signage and locations are defined and setup in SOS, re-ordering or rolling out signage to any or all of your sites is as simple as logging in. You can build your order from your custom catalogue and specify the required delivery dates. Once your order is complete, simply click on Submit. From there purchase orders are generated and distributed to the appropriate suppliers. Subsequently, you can follow your order's progress, view your order history, inventory levels and minimum re-order quantities.

To view an on-line demonstration of SOS, please browse to www.getsignage.com/sos-store-ordering-system/ and click on the SOS Software Demo link near the top of the page.
